## FILEROader: new functionality from FILERO

Press release

### New program for the export and import of data without the need for programming skills

With the new tool FILEROader from LIB-IT DMS, large amounts of structured data can be imported quickly and easily into a central database.

FILEROader is a new program for importing and exporting structured data to and from the Enterprise Information Management System FILERO. The data source and/or destination is Microsoft Excel. With FILEROader, the configuration process is intuitive and allows the user to control every aspect of the import and export process and to adapt the procedure to their organisation's requirements.

FILEROader also offers the user the opportunity to export data from the FILERO system to an Excel spreadsheet for further use. The whole process is quick, efficient and reliable. All steps of the import/export processes are logged so that the user can re-examine and verify every single step.

To find out more, please take a look at our website, where you can find a video detailing the features of the new program.

We'll be showcasing FILEROader and FILERO at the DMS Expo between the 15<sup>th</sup> and 17<sup>th</sup> of September in Cologne, Germany. You can find us in hall 7, stand I-001.
